

DNS Records Setup Instructions for thecima.org

Hi,

We need to add **2 additional DNS records** to complete the domain setup for Vercel. Please add these records to the DNS settings at the domain registrar:

Record 1: TXT Record (For Domain Verification)

- **Name/Host:** `_vercel`
- **Type:** `TXT`
- **Value:** `vc-domain-verify=thecima.org,1980c0f840703a51b3d5`
- **TTL:** `14400` (or leave default)

Record 2: A Record (For Root Domain)

- **Name/Host:** `@` (or leave blank, depending on your DNS provider)
- **Type:** `A`
- **Value:** `76.76.21.21` (Vercel's IP address)
- **TTL:** `14400` (or leave default)

Current DNS Records (Already Added)

You've already added this one correctly:

- **Name:** `www.thecima.org`
- **Type:** `CNAME`
- **Value:** `cname.vercel-dns.com`
- **TTL:** `14400`

Final DNS Configuration Should Look Like This:

Name	Type	Value	TTL
<code>www.thecima.org</code>	<code>CNAME</code>	<code>cname.vercel-dns.com</code>	<code>14400</code>
<code>@</code> (or blank)	<code>A</code>	<code>76.76.21.21</code>	<code>14400</code>
<code>_vercel</code>	<code>TXT</code>	<code>vc-domain-verify=thecima.org,1980c0f840703a51b3d5</code>	<code>14400</code>

After Adding These Records:

1. Save the changes in your DNS management panel
2. Wait **10-30 minutes** for DNS propagation
3. Let me know once done so I can verify in Vercel

Notes:

- If your DNS provider shows an error about the @ symbol, try entering just `thecima.org` or leaving the field blank
 - Some providers automatically append the domain name, so you may only need to enter `_vercel` instead of `_vercel.thecima.org`
 - DNS changes can take up to 48 hours to fully propagate, but usually work within 10-30 minutes
-

Important: Please add both records and save the changes. The website won't work properly until all three DNS records are in place.

Thank you!
